

Working Machines Corporation

Higher productivity through intelligent automation

Your competitive advantage

At Working Machines Corporation, we make it possible for you to improve distribution with innovative light-directed and warehouse automated controls solutions. Innovation is at the heart of everything that we do. That is why we are a leading provider of intelligent automation systems for manufacturing, warehousing and distribution. We provide scalable products, personalized to your business requirements so that you can implement the best practices, along with providing the highest standards of customer service, all in a highly cost effective manner. We help our clients gain a sustainable, competitive advantage by helping to optimize the movement of information and material to meet customer demand.

Solutions designed for maximum results

At Working Machines, our products are configurable to support best industry practices yet flexible enough to support your unique requirements. Our enhancement policy embraces client modifications in order to improve our offering. To provide clients with a higher return, we share the costs of client enhancements and provide customized services at a minimal comparative cost.

As a result of enhancements and ongoing R&D, Working Machines delivers software and hardware upgrades to enhance your system's current functionality and keep pace with industry advancements, helping you protect your investment. And our modularly designed approach, combined with a fast, affordable installation process, ensures quick results and ongoing success.

Today you need software solutions that do more than manage inventory levels, customer orders, labor force and material handling equipment. It must now deliver a progressively higher ROI for you to remain competitive. You need the intelligent automated controls found in our innovative solutions to reach new levels of performance.

SwiftPic - new levels of picking productivity

SwiftPic, our innovative light-directed solution, increases productivity and order fulfillment accuracy in your picklines, assembly/kitting and order consolidation/sorting areas.

This best-of-breed solution offers light-directed versatility by managing tasks typically performed by RF devices. Our trademark, multi-colored prismatic lens, Spectra™ paired with user definable display messaging provides greater direction when executing tasks to reduce errors. SwiftPic inquiries provide full visibility to your order fulfillment progress, workload balancing and productivity. The system can be installed anywhere you need to support light-directed activities such as racks, shelves, conveyor lines or mobile carts.

Swiftware – pulling products through to optimize efficiency

Working Machines' intuitive warehouse automated controls system, Swiftware, allows you to reach peak operating performance by uniquely *pulling* product through your facility to increase productivity and throughput. *Pulling* product through your facility removes inefficiencies commonly associated with under/over utilized labor and material handling equipment. To optimize material flow, Swiftware tracks the current and anticipated workloads at workstations to make key order/material release and routing decisions.

Whether stand-alone or integrated into your existing software application, Swiftware directs material flow in your facility by controlling a variety of technologies, including radio frequency (RF) data collection devices, pick-to-light, carousel, automated storage and retrieval systems (AS/RS), conveyor and automated guided vehicles (AGV). For ease of integration, standard controls drivers support direct integration with lower level PLC controls and standardized API's simplify integration of new control devices.

Ensuring customer satisfaction

Throughout your project implementation lifecycle, Working Machines maintains and provides key deliverables, including a project plan, timeline and process flows, to assist you in scheduling, resource planning and change management.

We recognize that you have unique training requirements. That is why we will assess your needs upfront, develop the optimal training solution and deliver the right training to the right people in your organization throughout the project implementation.

Because we are committed to your success, our focus on the customer is reflected in our post-sales 24/7- customer support and a guaranteed upgrade path for your solution's software and hardware components.

Industry-specific expertise

Since 1997, Working Machines has solved complex problems found in clients' production, manufacturing and distribution environments. Our products incorporate years of research and development, along with built-in industry-specific functionality, as well as advanced customized processes, to satisfy specific client demand and meet ongoing initiatives.

When you choose any of the Working Machines products, you are choosing a truly value-engineered solution. The most dynamically innovative product design on the market by a staff of engineers, developers and sales consultants who have decades of experience within the industry. We ensure quality and performance, while improving your bottom line. And by leveraging our industry-specific expertise, you can operate in the most cost-effective and integrated distribution environment possible.

Transforming demand into performance

With Working Machines, you are guaranteed on-going innovation. Our goal is to go beyond meeting expectations and transform demand into performance. The result is success through intelligent automation.
